

Co-funded by the European Union The effects of the Covid -19 crisis on workers in the Cultural and Creative Sectors

This research is part of the MAX project (Makers' Mobility Pilot project), co-funded by the European Union and coordinated by the European Creative Hubs Network (ECHN) in partnership with Fab Lab Barcelona, UPTEC and Makery.

The survey was designed by the Poligon Creative Centre, a member of ECHN, in co-production with the Centre for Creativity (CzK) and the analysis of the data and final report was prepared by IDEA Consult.

### List of ambassadors

This survey is an attempt to better understand the new conditions for cultural and creative workers in Europe brought about by COVID-19. The survey was live from June to mid-November 2020 and it was open to professionals of the 27 EU Member States, Bosnia and Herzegovina, Moldova, Montenegro, Serbia, Turkey, UK and Ukraine, so it can be inclusive to all the members of the European Creative Hubs Network.

The European Creative Hubs Network is a peer-led network with a mission to enhance the creative, economic and social impact of hubs around Europe and neighboring countries. As focal points for creative professionals and businesses, hubs offer the most effective way to support the growth and development of cultural and creative industries. The ECHN is a network of 275 creative hubs representing a number of about 30.000 workers and businesses in the CCS.

In order to maximise the reach of this survey to the CCIs workers, ECHN assembled a team of ambassadors to support the dissemination of the survey at a local level. Hence, the result of the survey is a collective effort of the following list of organisations that supported the dissemination to help collect evidence and advocate for the sector.

### Introduction

## Why the need for this research?

The CCS (Cultural and Creative Sector) is one of the hardest hit sectors in the EU. Workers in the sector are missing enormous amounts of turnover and income. Some are working from home, some are not working at all, many are trying to adjust to the new realities not knowing what will happen in the near future.

There should be more money in the European budget for culture and there should be a recommendation from the European parliament for governments to increase the budget of their respective ministries of culture to keep the cultural sector up and running and creating wealth.

The longer this health crisis lasts, the harder the consequences for the sector.

Although there are many estimates of loss of turnover, we also know that the workers in the sector, and especially the non - standard workers (independents and temporarily employed) are probably the most sensitive to these crisis in terms of loss of work and income. We already knew their situation was precarious, now it is even more so. There is hardly any quantitative research done in Europe to evaluate how the Covid -19 crisis affects CCS workers.

There are some discipline - specific surveys and country - specific surveys, but there is none that covers all of Europe.

We cannot state that we have succeeded in the goal to have statistic sound results, but we did succeeded in getting responses from all over Europe and even beyond.

This report is therefore the first to give indicators of how the workers in the CCS within all disciplines and from all over Europe experienced the Covid-19 crisis and the effects on their work.

We have applied for all the available aids but have got none. As a cross-sectoral creative center with a cooperative as a business model, I assume we are too hard to estimate. I suggest not to put businesses in silos but to dig deeper with the kind of companies, who have already a quite long history and also a full potential to produce the societal good in a new way. Creative centers are full of future innovations!

The answers and indicators we collected are divided in two main groups:

the business performance of workers in the CCS, where we look at the self - reported differences between 2019 and 2020, related to age, gender, years in business and work status (chapter 3)

The main questions we wanted to ask through this survey are:

How resilient are CCS - workers across Europe?

How do these workers experience the consequences of Covid-19 crisis and how do they adapt to the situation?

What is their assessment of the success of governments measures for the sector?

the assessment by CCS workers of (government) measures and the resilience of the sector (chapter 4)

2

### Responses

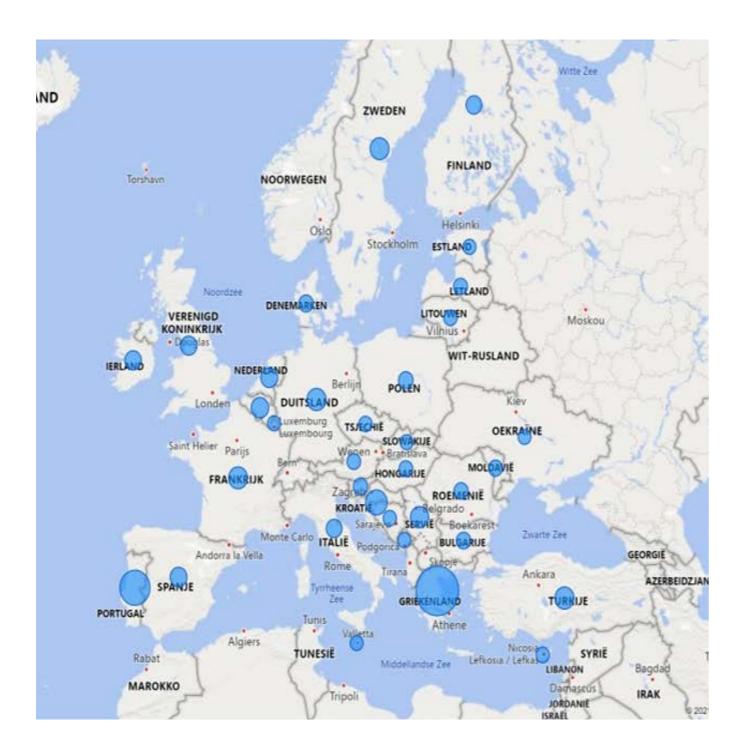

# What is the content of this research?

The number of responses we were able to use is 1830. 1345 people filled in the complete survey. For chapter 3 which contains the assessment of CCS - workers on various issues we had 1558 responses available. Since some respondents

However, the number of responses is enough to assert trends among the population surveyed. Most of those trends are corroborated by other reports. The value of this report lies especially in the number of respondents from south - eastern Europe, a region which has not been featured a lot within surveys. Most reports and surveys originate from the western part of Europe.

I think the EU should not only support organizations and businesses in the coming years, but especially think of which approaches they want to support. I.e. this is the time to invest in innovation, cross-sectoral projects and think of mainstreaming arts and culture in other sectors - for the wellbeing of society and the overcoming of social challenges.

had different follow - up questions, the number of responses is not the same for every question in the survey. For a Europe - wide survey the number of responses is not enough to provide statistically fully qualified statements.

To use the geographical dimension in a meaningful way in the further analysis of the survey, we clustered the countries into 5 regions, based on a geographical criterion:

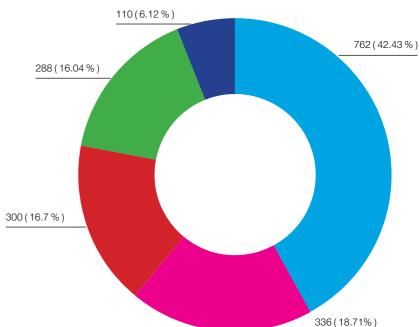

### Northern Europe:

Denmark, Estonia, Finland, Lithuania, Latvia, Sweden, Ireland, UK. West-central Europe: Belgium, France, Luxembourg, Germany, Netherlands.

East-central Europe: Austria, Slovenia, Czechia, Hungary, Poland, Slovakia, Ukraine, Moldova. South-western Europe: Portugal, Spain, Italy, Malta.

South-eastern Europe: Bulgaria, Croatia, Serbia, Turkey, Bosnia and Herzegovina, Cyprus, Greece, Montenegro, Romania.

If we compare this response to the incidence of CCS in different regions of the EU-27, as shown in the next graph, we see that south-eastern Europe is quite overrepresented: 42% in this survey compared to 6% for the whole of Europe. On the other hand it gives us a unique opportunity to get insights from a part of Europe that usually does not get the attention it deserves.

25 %

northern Europe

west central Europe

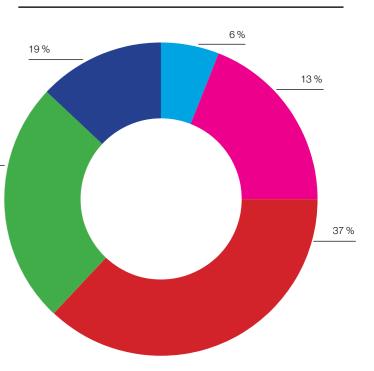

east-central Europe

south -western Europe

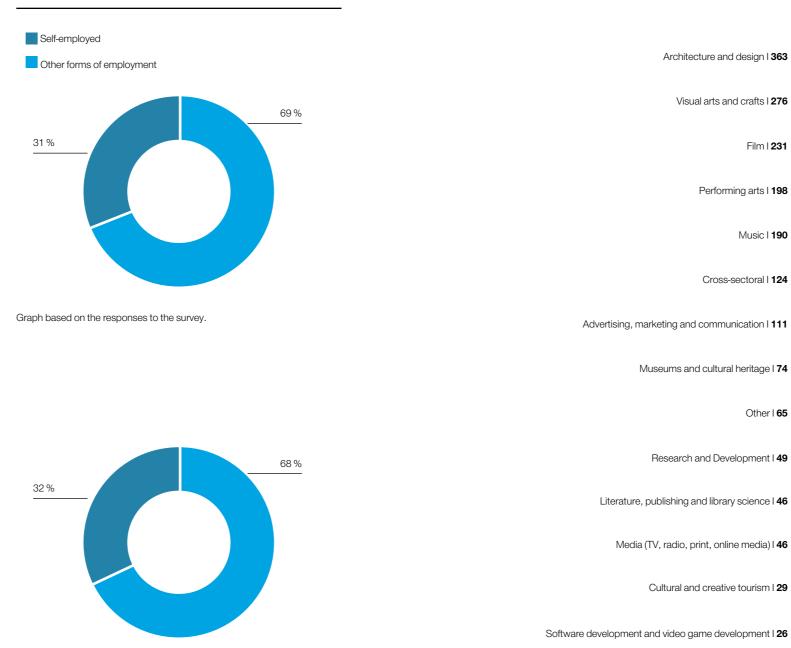

south-eastern

### Numbers and percentage of responses by region

Geographical spread of persons employed in the CCS in the EU-27 plus UK\*

\*Graph based on Eurostat data set exctracted in May 2020, referring to 2019.

Proportion of self-employed workers and other forms of employment\*

\*Graph based on Eurostat data set exctracted in May 2020, referring to 2019.

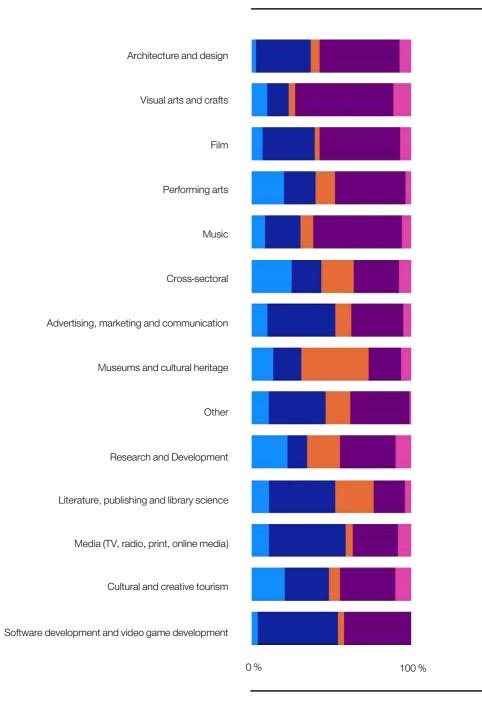

We also compared the percentage of selfemployed and other forms of employment within the survey with the percentages reported by Eurostat on the CCS. Here the percentages match almost completely: 31% is self-employed.

### Numbers of responses by discipline

	-	
0%		400 9

Looking at the number of the responses by discipline, we can tell that there are plenty of respondents from all relevant sub sectors giving to the research a good relevant sample for the whole CCS.

### Numbers of responses by discipline

### **Concluding remarks**

reports and surveys.

Because all disciplines are present and the percentage of independents is comparable with Europe in general, the results show how one of the most precarious groups of the CCS, the independent and contract workers, are hit by the Covid-19 crisis, in comparison with other groups of workers.

Employed in a non-profit organisation

Employed in a private company

Employed in a public institution

Self employed and contract workers

Student workers and other

The largest one is visual arts & crafts with 61% self-employed and contract workers, the second one is music with 55%, followed by film at 50% and design & architecture at almost 50%. The performing arts have 44% working as selfemployed or contract workers.

show the effects of the health crisis on their business.

Many foundations and non-profit organizations support the art and cultural scene in these times more than they can themselves. These institutions, which depend on donations, also need support to continue their work for society. New concepts are needed to make society more inclusive at a global level.

Although the survey may not be representative for the whole of Europe, it certainly provides valuable insights on a part of the CCS we often not see reflected in

In the next chapter we present the group of respondents in more detail and will

3

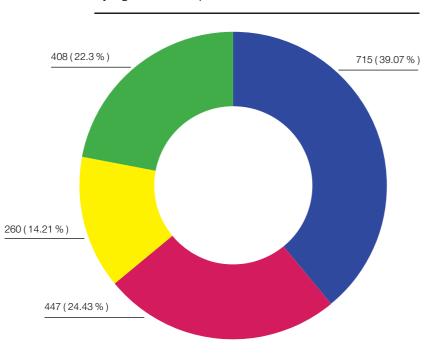

### Respondents

### Who responded to this research? The Respondents' profile

When we look at the respondents according to their legal status, we find that the biggest group are self-employed and contract workers, the second largest group is working within a private company and about 20% is working in a non-profit organisation or public institution.

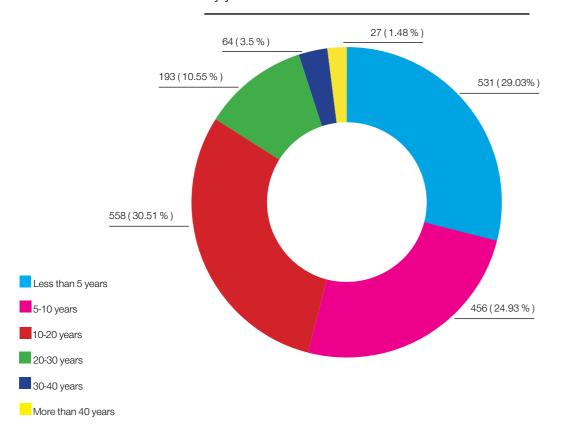

The largest group of self-employed and contract workers are found in South-western Europe and the smallest in East-Central Europe, where the percentage of people working in a public institution is more than twice as high as in other regions. Almost two-third of the respondents is female and one-third is male. The largest age group within the group of respondents is the age group between 30 and 40 years old: almost 40%. Collaboration between public and private sector is key, with strong civil society representation, which consists of creative, cultural and business tech sectors, co-designing impactful policies and collabotions across Europe.

The second largest group (almost 25%) is over 50 years of age. The youngest group, below 30 years, is 22% and the ones between 40 and 50 years old comprise 14%. The group over 50 years old is largest in Northern Europe, South-eastern Europe has the largest group of CCS-workers between 30 and 40 years old. It means that more than 60% of the population in this survey is younger than 40 years old.

Numbers and percentage of responses by age of the respondent

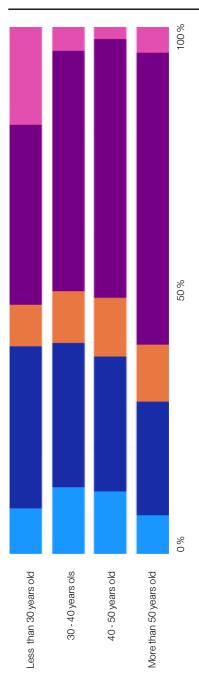

### Numbers and percentage of responses by years active in the CCS

It is interesting to see how long the respondents have been active within the CCS.

More than half of the respondents (53%) have been in business for less than 10 years and 4 out of 5 are active less than 20 years.

### Numbers and percentage of responses by age range and legal status

Employed in a non-profit organisation
 Employed in a private company
 Employed in a public institution
 Self employed and contract workers
 Student workers and other

I think it is very important to find ways of funding, new ways of working within the new normality maybe for more research-projects and maker projects until this is over (probably a couple of years) so that we don't loose all the knowledge in the field when people are forced to find other jobs. In dance, for instance, you need constant maintenance of your instrument, the body. Many dancers can not see that they can keep up their training without salaries so they start studying other professions. This will be a great loss for the artform, so we need to find ways to make it possible for professional dancers to stay and have the possibility to work and train even if the opportunities to perform, and get paid, are not many.

### The Respondents' business performance

Of all the respondents, 74% rated their business performance as average to very good in 2019. In 2020 that percentage was even less than 30%. Or the other way around: in 2019 less than 16% found their business performance to be poor or very poor, in 2020 it was almost 71%!

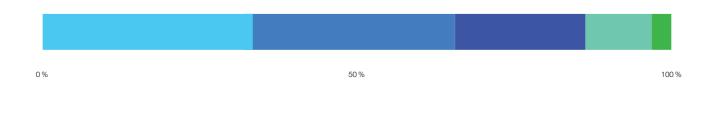

This means that two-third of the respondents estimate a transition from average to very goodperformance to a poor/very poor performance. And that more than 70% expect a poor to very poor performance of their business in 2020. Implementing regulations about the timeframe and pay, according to the scale and demands of a project, which no one can deviate from, so to reduce antagonism that leads to overtime and less payment. Collective employment contracts and increase of the minimum wage. New regulations about working from home referring to the working hours and compentations for the use of personal equipment.

If we look at the same comparison between 2019 and 2020, but now by legal status (self-employed and contract workers, employed in a private company, employed in a non-profit organisation) we see a more detailed picture.

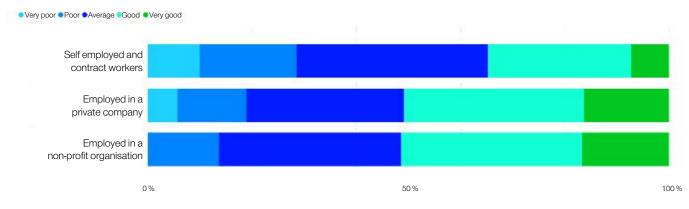

### How was your business performance in 2019? (% responses)

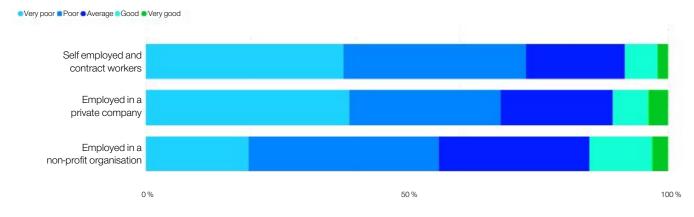

### How was your business performance in 2020? (% responses)

### How was your business performance in 2019? (% responses by legal status)

### What is your business performance projection for 2020? (% responses by legal status)

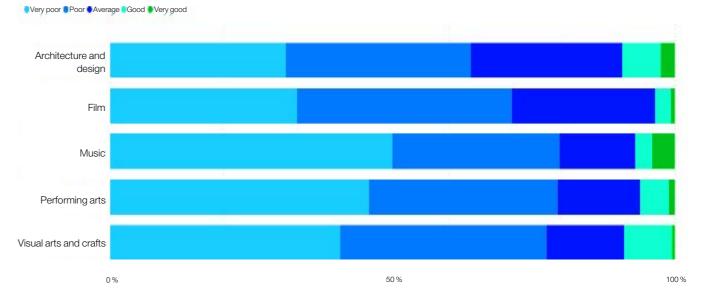

When looking at 2019, 71% of self-employed and contract workers state that their business performance is average to very good, in 2020 that percentage sank to 27%, a decline of 44%. Workers in a private company looked at their performance as 81% being average to very good in 2019, in 2020 that percentage lowered to 32%.

Although their business performance looks better than for self-employed or contract workers, the difference in performance between 2019 and 2020 is even more: 49%. Workers in non-profits looked at the business performance of their organisations as average to very good for 86%, in 2020 that was 44%, the highest of the three groups.

This shows that self-employed and contract workers as a group estimate to have the lowest rate of average to very good business performance in 2020, but that workers in private companies experienced the biggest negative change from 2019 to 2020.

Although workers in non-profits seem to be relatively better off, the negative change in performance is still 42%, which is still enormous!

### What is your business performance projection for 2020? (% responses by discipline)

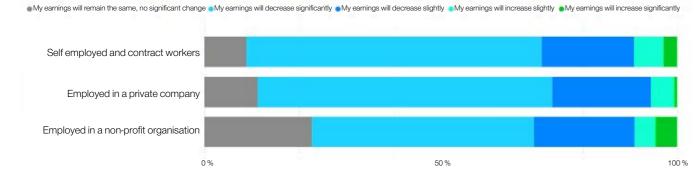

When we look at the business performance expectations for 2020 by discipline, the numbers are worrisome. Within music and performing arts more than 79% expect poor or very poor business results.

Create communication channels/ forums/meetups that facilitate and encourage co-operation between local creatives, both intra- and cross-sectorial. This may help local sectors to form stronger selfresilience and create new synergies across sectors.

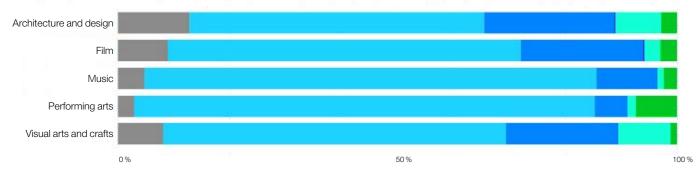

Visual arts (77%) and film (71%) follow closely. Only within design and architecture the projections are a little less grim with almost 64% expecting poor or very poor business results in 2020.

How do you estimate the change in your business earnings in 2020 compared to those in 2019? (% responses by legal status)

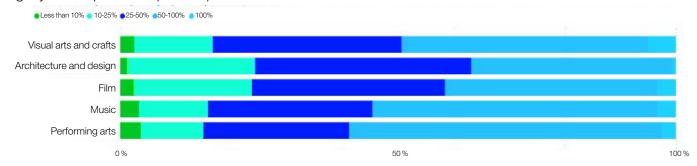

How do you estimate the change in your business earnings in 2020 compared to those in 2019? (% responses by discipline)

My earnings will remain the same, no significant change My earnings will decrease significantly My earnings will decrease slightly My earnings will increase slightly earnings will be an increase sl

What is the estimated change in your business earnings in 2020 compared to those in 2019? (%responses by legal status among those who responded 'My earnings will decrease significantly or slightly' to the previous question)

The same pattern comes from the answer to the guestion to estimate the change in business earnings from 2019 to 2020.

The workers from a private company expect the same by 83%. 81% of self-employed and contract workers expect a decrease of earnings in 2020, while 68% of those employed in a non-profit expect the same. When we look at differences between disciplines, within music 91% expect a decrease in business earnings!

The other performing arts follow with a staggering amount of 88% expecting a decrease in business earnings. Within the film sector 85% of the respondents expects the same, visual arts 81% and within design & architecture 76% expects a decrease.

Since the input for the survey ran from June until November 2020 it is probable that these negative expectations may have realised.

### **Concluding remarks**

The numbers leave hardly any other conclusion possible than that Covid-19 and the following economic crisis have hit the workers in the CCS very hard.

to 16% in 2019.

es range from 42% to 49%.

When looking at differences between disciplines: within music and performing arts more than 79% expect poor or very poor business results, followed by visual arts (77%), film (71%) and design & architecture (64%).

The expectations of business earnings display a similar pattern: 83% of workers from a private company expect a decrease in earnings, followed by 81% of self-employed and contract workers and 68% of those employed in a non-profit. Within the music discipline 91% expect a decrease in business earnings, followed by the other performing arts (88%), the film sector (85%), visual arts (81%) and design & architecture (76%).

A lot of "innovation money" was distributed to the for-profit sector. Meanwhile the non-profit sector is as innovative and agile and reinventing itself as ever, with not a dime to spare. Funding to realize covid-safe cultural productions would be very important, as technically anything done at this age has lower ticket sales capacity than what would be needed to cover the costs.

### More than 70% of the respondents expect a poor or very poor business performance in 2020, compared

And although there are differences according to legal status, the negative chang-

### Opinions

What is the respondents opinion? Assessment by **CCS-workers** 

It is clear the respondents are of the opinion that government measures did not work well in responding to their precarious situation.

In the survey the respodents were asked their opinion on a number of subjects. The first was their opinion on the government measures in their countries. 60% of the self employed and contract workers have a negative opinion on government measures, 54% of workers in a non-

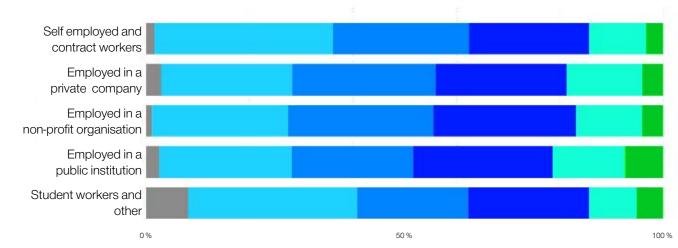

Financial incentives to cover investments forced by adaptation to post-Covid reality. Financial incentives to modernize and digitalise cultural and creative services. Financial incentives to international cooperation projects and open calls to cross CCI's with other industries.

profit organisation, 53% of those employed in a private company and 49% of the workers in public institutes. It is clear the respondents are of the opinion that government measures did not work well in responding to their precarious situation.

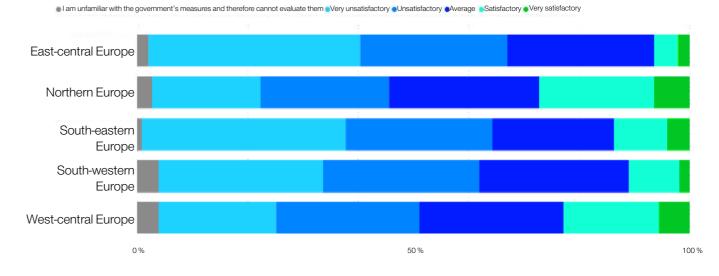

### Evaluation of government measures

How would you evaluate the measures taken by the government up to this point to alleviate the effects of the Covid-19 pandemic on your business? (% responses by legal status)

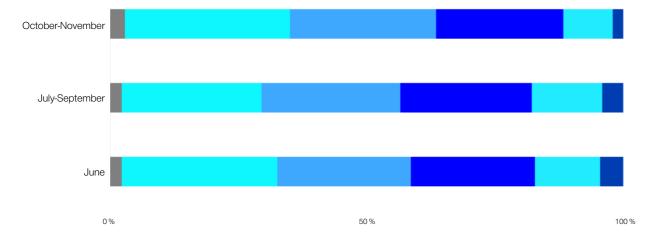

When looking at the same question with a regional perspective, the difference of opinion between regions is evident. CCS workers in Eastern and Southern Europe tend to be much less satisfied with the recovery measures taken by governments, in comparison with the Northern and Western

regions. The level of dissatisfaction of the former is higher than the latter's: 65% in East-central Europe, 63% in South-eastern Europe, 58% in South-western Europe compared to 43% in Northern Europe and 47% in West-central Europe. When asked to share opinions on the measures taken so far and suggestions about further measures that national governments or the EU should take to alleviate the consequences of the crisis, CCS-workers answered in various ways.

The statements clearly show that there are many Member States that do not protect their workers in the CCS very well or do not have the budgets other Member States made available in this respect. How would you evaluate the measures taken by the government up to this point to alleviate the effects of the Covid-19 pandemic on your business? (% responses by survey time period)

The analysis of respondents' opinion by responses time period reveals that there are no major differences in the assessment of government measures. Although the timing and the scope of the measures adopted to tackle the Covid-19 pandemic have been different across Europe, the evaluation of government's measures is quite consistent and homogeneous across time periods. Both those who responded to the survey in the summer period and those who did so in the fall period are mainly very dissatisfied or dissatisfied with the governments' measures adopted (on average 60% in all time periods). There is also a slight percentage difference between those who were very satisfied or satisfied in the June-September period (about 20%) and those who responded in the October-November period (only 10% consider the measures very satisfactory or satisfactory). Governments need to see the cultural business also as part of economy to save. It is completely hypocritical to allow flying again in airplains, where 200 people are in a small space for hours (even with masks) and to forbid theaters, where people also come together, from opening. It gives a strong and very negative signal against the cultural business. There need to be more and an open conversation with the sector. It feels now that it is a forgotten sector, the least important. It would help to have more and open conversations directely with the sector.

### **Future perspectives**

We asked the respondents their opinion on a number of future chances for the sector and on a number of threats.

The responses to the chances for the future reveal a very mixed portrait.

A large majority expects op-

portunities to open up for new services and products.

agree that workers within the

CCS will develop a stronger co-operation between each other.

Only expect the sector to be

stronger after of the crisis, and they certainly do not expect the state to effectively support the sector by measures that alleviate the effects of the crisis.

These responses prove the divided mood of a sector which thinks it has to rely on themselves to survive, without a supportive government.

think the crisis will result in a braindrain to more prosperous countries

are of the opinion there will be

less opportunities for new projects

</5% 2

fears that investments in new equipment, training and education will be postponed

expects to become unemploved.

These answers paint a portrait of a sector that hopes for the best, but expresses fear for the near future. On a individual business level there is hope to stay employed, develop new products and services and to cooperate more within the sector.

New opportunities to develop innovative services and products will open up

The state will alleviate the effects of the crisis on our business operations with effective actions and measures

The co-operation between the workers within the creative and cultural sectors will become stronger than before

The cultural and creative sectors will come out of this crisis stronger than before

I will become unemployed

The crisis will result in additional brain drain to more prosperous countries

> There will be less opportunity for international co-operation

> There will be less opportunity for new projects

Customer demand will force us to lower prices

Investments in new equipment, training or education, and other non-essential costs will be postponed

For the sector as a whole the respondents are not optimistic at all. We have to keep in mind that a majority of the respondents are from Southern Europe where the CCS is already in a weaker position than for example in Northern Europe where the CCS holds a stronger status. A brain drain is expected, less opportunities for new projects and international cooperation, the

fears to be forced to lower the

expect there will be less oppor-

tunities for international cooper-

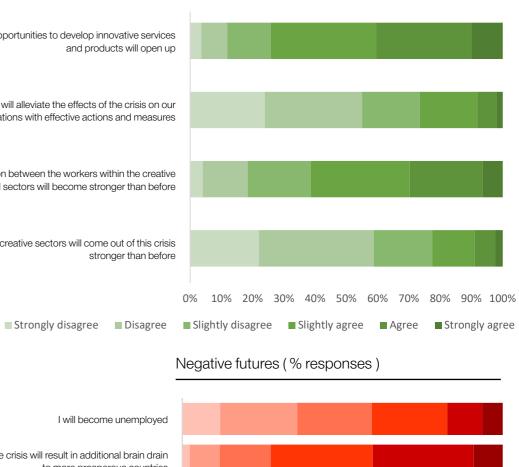

There are also other aspects of

the future the respondents are

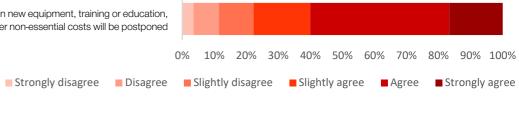

not so optimistic about.

ation

prices.

### Positive futures (% responses)

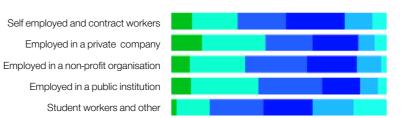

state will not help them n an effective way, and especially they fear investments will be postponed. And since investments are needed to develop new products and services, this is not a good sign for the future of the CCS. Especially in Member States which do not have broad support programs for the CCS and its most vulnerable part: the cultural workers.

### Looking if legal status of the respondents made a difference in the opinions. Positive futures (by legal status)

### (by legal status)

### I will become unemployed

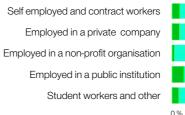

### There will be less opportunities for international cooperation

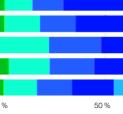

### Employed in a private company Employed in a non-profit organisation Employed in a public institution Student workers and other

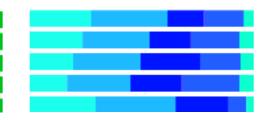

Self employed and contract workers

### Customer demand will force us to lower prices

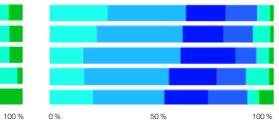

### New opportunities to develop innovative services and products will open up

The state will alleviate the effects of the crisis on our

business operatons with effective actions and measures

The cultural and creative sectors will come out of this

Strongly disagree Slightly disagree Slightly disagree Slightly agree Strongly agree

Workers of public institutions are slightly more positive about the possibilities of new products and services than the others. And the self employed and contract workers are the most negative about the idea that the sector will be stronger after the crisis. And they are also the group with the most negative opinion on the government measures for the sector.

Self-employed, contract workers and student workers are the largest groups to fear unemployment in the near future. That might not come as a surprise, because their working status is very insecure.

On other topics the opinions did not differ much between groups with a different legal status.

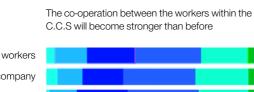

Employed in a private company Employed in a non-profit organisation Employed in a public institution Student workers and other

### 5.

### Conclusions

# What were the research questions?

The main questions we wanted to answer are:

How resilient are CCS workers across Europe? How do these workers experience the consequences of Covid-19 crisis and how do they adapt to the situation? What is their assessment on the success of governments measures for the sector?

To answer these questions for CCS - workers across Europe we do not have enough response from all European countries. The number of the responses we were able to use is 1830. 1345 people filled in the complete survey. However, the I actually believe that some change is necessary but that is a difficult topic. Perhaps making sure that even the most vulnerable have some support will go a long way. Creativity and the creative industries will never go away. Sadly they are one of the lower priority areas, for the work is not critical and many groups will take their own steps to produce activities.

number of responses is enough to assert trends among the population surveyed and especially for South-eastern and South-western Europe. Most of those trends are corroborated by other reports which we involve in the discussion of the results.

There needs to be a minimum of 1% in the budget for culture, we need to establish minimum rates/ hour of at least 10€, we need to have WORK CONTRACTS and have them be mandatory (even if you work for only a day), we need a new kind of fiscal law for culture professionals that understands our line of work and its\' intermittence. We need to have our intellectual property rights strengthened, especially in the digital realm. We need a Universal Basic Income for everyone because to have famine in Europe in the XXI century is unacceptable.

A recent study by EY, for example, shows that, with a loss of 31% of its turnover, the cultural and creative economy is one of the most affected in Europe, slightly less than air transport but more than the tourism and automotive industries (-27% and -25% respectively) and that even those subsectors that seemed to be protected by home consumption faced a sharp drop in income.<sup>1</sup> This is generally due to the central role of physical experiences and sales in their business models. The study also indicates that the crisis has hit Central and Eastern Europe the hardest (from -36% in Lithuania to -44% in Bulgaria and Estonia). These numbers are for the sector and subsectors as a whole, but do not reveal the situation for the CCSworkers themselves.

A majority of the responses (61%) is from Southeastern and South-western Europe. Since we do not know of comparable studies on these regions, this survey indicates trends among the workers in the CCS that cannot be found elsewhere. That makes the results of this survey unique.

We also compared the percentage of self-employed and other forms of employment within the survey with the percentages reported by Eurostat on the CCS. Here the percentages match almost completely. In that sense the survey is representative of the division within the working population of the CCS.<sup>2</sup>

<sup>1</sup> EY, <u>Rebuilding Europe</u>, January 2021.

<sup>2</sup> see page 14, Graph based on Eurostat data set exctracted in May 2020, referring to 2019.

### **Business** performance

The main conclusion on how workers experience the consequences of the Covid-19 crisis is the enormous drop in business performance from 2019 to 2020.

2020

74% rated their business performance as average to very good in 2019, in 2020 that percentage was less than 30%

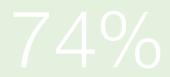

≈71%

less than 16% found their business performance to be poor or very poor in 2019, in 2020 it was alsmost 71%

This means that two-third of the respondents estimate a transition from average to very goodperformance to a poor/very poor performance.

Of all the respondents:

When we detail these numbers according to legal status we see the following results:

> In 2019, 71% of self-employed and contract workers state that their business perfomance is average to very good, in 2020 that percentage sank to 27%, a decline of 44%.

In 2019, 81% of workers in a private company looked at their performance as being average to very good, in 2020 that percentage lowered to 32%. Although their business performance looks better than for selfemployed or contract workers, the difference in performance between 2019 and 2020 is even more: 49%.

In 2019, 86% of workers in non-profits looked at the business performance of their organisations as average to very good, in 2020 that was 44%, the highest of the three groups, but also experienced a drop of 42%.

discipline, the numbers are worrisome:

### When we look at the business performance expectations for 2020 by

more than 79% within music and performing arts expect poor or very poor business results

### 77%

of the respondents from the visual arts expect poor or very poor business results

### 71%

from the film sector expect poor or very poor business results

within design and architecture expect poor or very poor business results in 2020

The same pattern comes from the answer to the question to estimate the change in business earnings from 2019 to 2020 related to legal status:

> 83% of the workers from a private

company expect a negative change

81%

of self-employed and contract workers expect a decrease of earnings in 2020

68%

of those employed in a nonprofit expect the same When we look at differences between disciplines on changes in business earnings from 2019 - 2020:

> 91% within music expect a decrease in business earnings

88% of performing arts expect a

decrease in business earnings

85%

of respondents in the film sector expect the same

81% in visual arts expects a decrease in business earnings

76%

within design & architecture expect a decrease in business earnings The above mentioned EY study states that performing arts and music are the most impacted disciplines (-96% and -76% respectively between 2019 and 2020).

A recent study commissioned by the CULT Committee of the European Parliament also corroborates these data and highlights that, both in general and above all within these two specific disciplines, the most affected work category are the self-employed, very often not supported by any social security system and by any or poor financial support to survive the crisis.<sup>3</sup>

A recent study from Germany shows similar results for the performing arts discipline (-69%), music (-59%) and visual arts (-51%). The result is that some sectors after years of growth fall back in turnover to the level of 2003.<sup>4</sup>

In the United Kingdom the Artists Information Company published the results of a survey among visual artists mid 2020 where 60% expected a decrease of income of more than 50%, 65% had a negative opinion on the governments measures.<sup>5</sup>

A survey among jazz musicians in Europe and the USA reveals that 61% estimate that their 2020 income will be at least 50% lower, 30% think it will be even 75% less. 55% has no live performances scheduled for 2021.<sup>6</sup>

A survey among Slovenian cultural and creative workers from late autumn 2020 showed that 20% is out of work, 40% has some work but not enough and another 40% have no guaranteed work until the end of the year.<sup>7</sup>

For the Netherlands the Central Bureau of Statistics calculated for the Ministry of Culture that 75% of self-employed in the performing arts had 80% loss of turnover in the first quarter of 2020 compared to the first quarter of 2019 and in film and television production two-thirds of the self employed experienced a loss of 71% in turnover.<sup>8</sup>

The information from these surveys combined show the situation of self-employed and contract workers in the CCS is a Europe - wide precarious situation, but this survey shows that in some regions of Europe the consequences of the Covid-19 pandemic are even worse. This constitutes a crisis within a crisis.

### **Government measures** and resilience

The second part of the research question is about the assessment of government measures.

The respondents are not very positive about the government measures regarding their situation:

> We need the authorities to take into account the long-term effects of the crisis. In the audiovisual sector, for example, part of the payment closely follows the completion of work and another part (royalties) comes months later. The loss on royalties linked to lockdown will only

happen as of January 2021.

of the self employed and

contract workers have a negative opinion

54%

of workers in a non-profit organisation

of those employed in a private company

of the workers in public institutes

### What about the future of CCS?

The respondents have mixed feelings with negative feelings predominating:

> Only 20% expects the sector to be stronger after of the crisis

agree that workers within the CCS will develop a stronger cooperation between each other

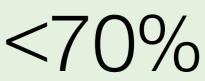

≈75%

open up for new services and

expects opportunities to

products

do not trust the government to take measures which alleviate the effects of the crisis

think the crisis will result in a braindrain to more prosperous countries

are of the opinion there will be less opportunities for new projects

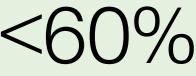

### <75%

fears that investments in new equipment, training and education will be postponed

### <70% 2/3

expect there will be less opportunities for international cooperation

fears to be forced to lower their prices

expects to become unemployed

If we look at the answer from this study on the resilience of CCS-workers, this answer can be split in two:

looking at resilience as the ability to recover from set-backs, we see that CCS-workers still see some possibilities for themselves and **try to adapt to the new situation**  looking at resilience in the sense of being a future proof sector, the conclusion is that the dire state of CCS-workers is **not future-proof at all**.

The future perspective of their business is quite negative and government measures have not been able to remedy their situation or providing them with a positive perspective.

If anything, the Covid-19 crisis has made clear that the CCS are not future - proof in terms of economic solidity and sustainable business models. It is also clear that within the CCS, the self employed and contract workers pay the highest price in terms of loss of turnover and income.

When looking at the reports and surveys it seems that the losses of the workers are bigger than that of the sector as a whole. This should have consequences for future policy development.

### How to change that situation

## This crisis within a crisis should not stay hidden any longer.

We present a few recommendations, mostly drawn from the report Research for CULT Committee – Cultural and creative sectors in post-Covid-19 Europe: crisis effects and policy recommendations<sup>8</sup>, which are applicable:

The bargaining situation of CCS - workers is weak. To remedy that weak position the representation of independent and contract workers in the CCS has to be strenghthened when it comes to negotiating fair pay, working conditions, labour relations, social rights and taxation rules. Unions and networks of independents and other CCS-workers should get a position at the table in all Member States and on the European level. To reach that position the right of association for all workers in the CCS, regardless of their working status has to be acknowledged.

Fair pay as a principle should become self-evident for (working) contracts within the CCS. It is therefore necessary to connect the Fair Pay principles and Fair Pay movements of different Member States and develop sound EU-wide rules for payments that establish a level playing field for all workers in the CCS relating to remuneration by governments, funds, art commissions and cultural institutions. The Creative Europe programme could be a funding source for the financing of emerging EUwide fair pay networks. 0

S Propose a framework for fair practice for selfemployed and contract workers that does not lead to precarious employment and income and ensures an equal and level playing field in comparison to other workers. Develop a good practice collection on fair and sustainable practices.

Establish collective bargaining rights to independent and other contract workers in the CCS, based on their fundamental right to associate. Collective bargaining should be understood as a basic pillar to generate decent income for the CCS. A networked approach of collective management societies and CCS unions is crucial to reach critical mass, which implies

bargaining power. Special attention should be paid to democratic principles of bottom-up approaches, for example by creative hubs.

Plead for a fair framework for social rights and access to social security for CCS-workers in all cases of non-standard work, alleviating the precarity of the situation of independents within the CCS. Take into account the shifting and hybrid status of workers (for example combining employee and independent status). Investigate models of a public business interruption insurance.

<sup>8</sup>IDEA Consult, Goethe-Institut, Amann S. and Heinsius J., <u>Research for CULT</u> <u>Committee – Cultural and creative</u> <u>sectors in post-Covid-19 Europe: crisis</u> <u>effects and policy recommendations</u>, European Parliament, February 2021, page 106 and further I think the EC should create a special funding scheme to support arts and culture professionals and institutions. At national level, only rich central European coutries have the possibility to develop special support to their cultural and creative sector. Peripheral and neighbouring countries are already experiencing the lack of response from their national governments. There is also a strong need to develop more open and articulated policies and sharing of resources between countries - namely, pan-European social security directives/ recommendations and work models/ regulations. And this not just for the cultural sector! Precariousness is the front door to poverty (and pandemics). International collaboration is fundamental to overcome the current situation. Europe has the conditions to reinvent itself and set an historical example, as it has done before.
